

'Australia, the driest continent, but not in your backyard'

The Aussie

Bladda Tank

Under House Water Tank

Why spoil a great outdoor living area with an unsightly plastic or metal tank when a Bladda Tank can hide away under a house or deck

Water is a rare and precious commodity and with water restrictions becoming a permanent feature in our life, all Australians need to find ways to save.

Bladda Tank can be carried down a path or other area of limited access.

The **Aussie Bladda Tank** is a flexible water tank designed to fit the sub-floor area of your home or decking, allowing you to store large amounts of rainwater without taking up valuable space in the backyard.

Collecting rainwater from most of the roofed area rather than just one or two downpipes as used by a traditional rain tank means, **Aussie Bladda Tank** is a more effective means of capturing and storing water.

You might ask how much water do I need with **Aussie Bladda Tank** you can be rest assured in knowing that you can add to your bladda tank once it's installed, increase your water storage as required.

From a simple residential garden to a rural property, **Aussie Bladda Tank** is a water storage solution designed to fit your watering needs.
