

ROOT CONTROL MEMBRANE

Do you need a strong, flexible yet durable membrane to help combat your tree roots problems?

Do you want a product that is reliable, resistant against chemicals yet will not blow your budget?

Let me introduce you to:
ROOT CONTROL MEMBRANES.

The Root Control Membrane barrier is made from High Density Polyethylene (HDPE) making it strong, versatile and UV resistant.

It is the perfect product for protecting walkways, roads and building foundations as well as solving all of your landscape gardening requirements.

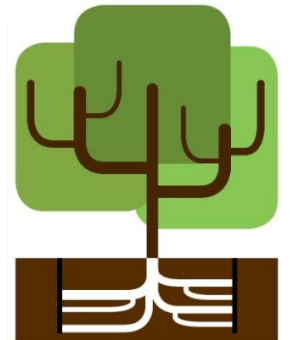

Root Control Membrane barriers have ultraviolet chemical stabilisers added to the membrane enabling a life span of 10+ years when exposed and up to 20 years if fully covered. It also has good resistance against many agricultural chemicals and pesticides as well as most soil types including salty soils.

The membrane is tough and durable enabling it to control tree roots & soil moisture.

Root Control Membranes offer a superior product at a competitive price giving you both an affordable and reliable alternative for your root control needs.
